National Bridge Inspection Standards &
Bridge Maintenance Program
Van Wert County
October 13, 2022

By: Mark Sherman, PE
CEAO Federal Bridge QA/QC Engineer

The scope of this review is to evaluate the agency's bridge inspection program based upon The Ohio Revised Code, the ODOT Manual of Bridge Inspection (MBI), and the National Bridge Inspection Standards (NBIS). This includes the following checklist, interviews with staff members responsible for the inspection program, review of files and documentation, and field inspection of bridges. Note: the inspection program includes inventory, maintenance and load rating in addition to the field inspections.

Part II: Field Review

Inspection Reports (metric 12)

As part of this review, seven bridges were field reviewed to compare conditions with the most recent inspection report. The individual condition ratings for all of the field sampled bridges properly reflected the field conditions within the tolerance of 1 rating value when compared to the Manual.
Summary ratings correspond with the NBIS inspection items.

Defect Photos: Good defect photos, but they need labeled so we know which beam/span/area were are looking at, plus, it would be better to have a couple of wider angled shots to put the defects into scale and context. Also, I was expecting to see a couple photos of the pier piling, given the beginning of section loss at the waterline area on a few of them.
Channel Photos: One really Good Channel Photo in the Channel Photo section, the other one doesn't quite capture everything that is required. But there are suitable ones in the general photo section that would pass the criteria.

Field Review Summary:

Overall, the county is doing an excellent job with their bridge inspection program. Their records are complete and organized. I found all of their condition ratings to be within the parameters set by the inspection manual. The comments could use a little more elaboration at times, with corresponding photos to show the Location, Extent and Severity of the defects. Otherwise, the comments and photos are very good. I would suggest that the older photos be archived and only keep the latest photos in Assetwise Inspection photo section and be sure to date and label the photos.

Another reminder that Scour always control substructure when scour is present. Also, in the case of prestressed box beam bridges, the deck and superstructure ratings are always the same, unless there is a separately poured deck.
